

# IBM IBase DESIGNER

## DAY COURSE 5 For iBase designers

Learn how to create a bespoke iBase intelligence database for your organisation. You will create your own database during this course which you can use as a template for further designs.

### Training Style

This is a hands-on training course where participants learn how to design an iBase database with input from an iBase expert and technician.

## Learning Outcomes

**Prerequisites**  
I2 Analyst's  
Notebook I & II

Set-up security and access controls

Add attributes to entities and links

Create and modify entity and link types

Index and set up alerts

Configure datasheets to improve data ingestion efficiency

Delete and purge soft-deleted records

Create and modify fields on entities and links

Utilise labelling and charting schemes to define what is displayed in I2 Analyst's Notebook from iBase

Create, import, and modify icon lists and pick lists

Audit and administer for compliance and information assurance
